

ACTIVE OXYGENS FOR ANIMAL HYGIENE

Protecting animal drinking water from contamination without chemical residues

A clean, safe water supply is essential in animal husbandry. Especially if drinking water is used as a carrier for various feed supplements and medicines, it is important to avoid the formation of biofilms and bacteria growth in water.

PERACLEAN® is a peracetic acid-based biocide that is fierce to microbes but gentle to animals, people, and the environment. That's because after its powerful antimicrobial action, PERACLEAN® decomposes into just oxygen, water, and vinegar — leaving no trace of harmful chemicals.

PERACLEAN® inhibits microbial contamination in drinking water that directly affects animal health and farm performance. It especially prevents pathogens from traveling from one animal to another. Peracetic acid is a valuable part of comprehensive animal drinking water management.

**Safe drinking water for your animals,
no chemical residues on your farm.**

At Evonik Active Oxygens, **sustainability** is at the core of futurizing our business. We make some of the world's greenest chemicals: After their powerful oxidation action, hydrogen peroxide and peracetic acid break down into benign substances that leave no trace of harmful chemicals on food or the environment.
